

Trans-Pacific Partnership

What's at Stake for Washington Agriculture?

February 2015

Washington is a leading producer and exporter of agricultural products, ranking 9th among the 50 U.S. states in the value of its agricultural exports in USDA's most recent calculations. Washington's agricultural exports reached an estimated \$4.5 billion in 2013*, up from \$2.6 billion in 2009. Washington's exports help boost farm prices and income, while supporting about 34,200 jobs both on the farm and in related industries such as food processing, transportation, and manufacturing.

Washington's top five agricultural exports in 2013 were:

1. Fruits and nuts, processed – \$1.2 billion
2. Wheat – \$706 million
3. Fruits, fresh – \$565 million
4. Vegetables, processed – \$276 million
5. Dairy products – \$216 million

Nationwide, U.S. food and agricultural exports reached a record \$150 billion in 2014, supporting more than one million American jobs. Global demand for these products is growing but so is competition among suppliers.

*State-level export data for 2014 will not be available until October 2015.

Trans-Pacific Partnership

The Asia-Pacific region includes some of the world's most robust economies. The Trans-Pacific Partnership (TPP) with Australia, Brunei, Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore, and Vietnam is an opportunity to advance U.S. economic interests in a critical region that accounts for 40 percent of the world economy, and to respond to the regional and bilateral trade agreements being negotiated by our competitors. A high-standard TPP agreement that opens markets will support expansion of U.S. agricultural exports, increase farm income, generate more rural economic activity, and promote job growth.

Agricultural Benefits from the TPP

In countries where the United States has free trade agreements, exports of U.S. food and agricultural products have grown significantly. Recent examples include our pacts with Chile, Colombia, Panama, South Korea, and CAFTA-DR (five Central American countries and the Dominican Republic), where trade agreements have boosted U.S. exports. The TPP promises similar benefits.

- **Wheat:** Japan is the largest market for U.S. wheat and U.S. exports reached almost \$1 billion in 2014. U.S. exports of wheat to Japan face high tariffs and restrictive tariff-rate quotas. Under the TPP Agreement tariffs across the TPP region will be cut, offering new market access opportunities to U.S. wheat producers and exporters. In 2014 the United States exported more than \$2 billion of wheat to the TPP region.
- **Fresh Fruits:** U.S. exports of fresh fruits to the TPP countries face tariffs as high as 40 percent. Under the agreement, tariffs across the TPP region will be cut, offering new market access opportunities to U.S. fresh fruits producers and exporters. In 2014 the United States exported almost \$3.1 billion in fresh fruits to the TPP region.
